“Your health is a precious resource...take care of it with **Med Docket™**”

Med Docket™

My **Med Docket™** is a portal which allows storage, access, update and organization of critical medical information in a secure and convenient location on the web.

It can be instantly accessed from any place in the world. All it needs is an Internet connection.

Organized

Med Docket™ is equivalent to a bank vault.

The medical records kept intelligently in a 'vault' on the web, will give doctors holistic feedback on your health condition.

No more looking for CT scans, x-rays, blood reports etc., in long forgotten places.

Med Docket™ is geared to managing health records through a unique system that will enable you to fulfill a responsibility by ensuring that your family has in their possession the valuable resource of their health records when required.

It was developed as a long-felt need to give both doctors and patients easy access to complete health records when illness strikes.

There is greater focus on an individual's health today with ever increasing work stress levels.

People spend large sums of money on health check-ups, however none of this information is stored for more than a few years.

Disease is an uninvited guest and access to medical information can be the deciding factor between life and death.

An organized medical record will give your doctor complete, legible information thus providing you with better care.

With **Med Docket™** there is assurance of always being in safe, caring hands. In times of emergency, access to records can avert incorrect lines of treatment.

Worldwide Access

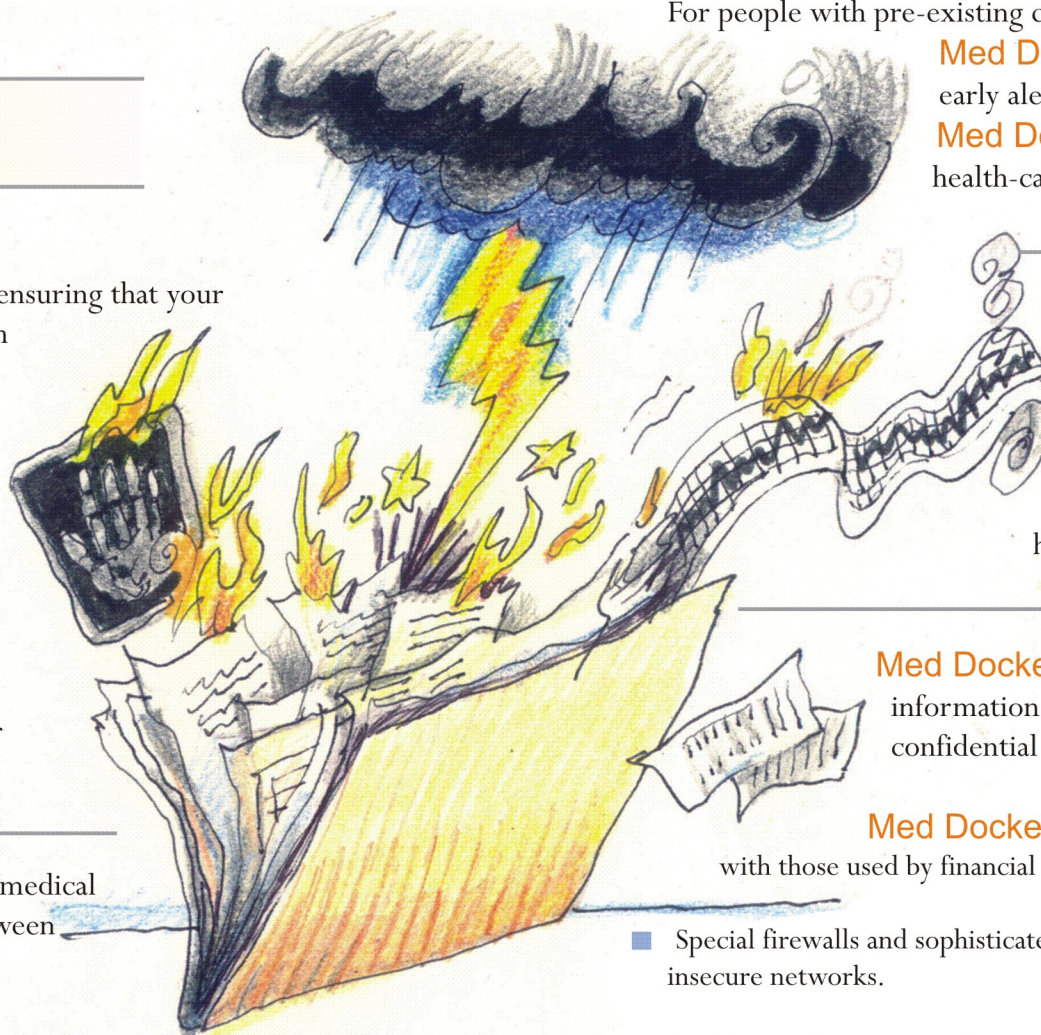

A unique feature of **Med Docket™** is the **ALERT signals**

that will be received if any changes are noticed in your health curve.

For people with pre-existing conditions,

Med Docket™ facilitates in monitoring the disease by sending early alerts, helping prevent any imminent complications.

Med Docket™ was developed to fulfill a person's right to better health-care access.

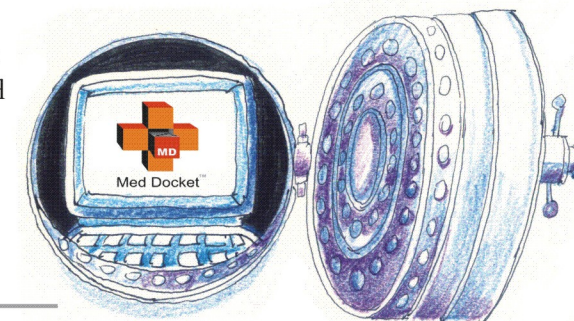

We take great care to ensure your information remains safe, always. **Med Docket™** is **Health Insurance Portability and Accountability Act (HIPAA) compliant.**

HIPAA are standards laid down by the US Government that deal with securing private healthcare information.

Med Docket™ gives you the freedom to choose the bits of information you wish to reveal, keeping you in control of your confidential data at all times.

Med Docket™ is stored on our dedicated servers, with security at par with those used by financial institutions.

- Special firewalls and sophisticated protocols are used for secure data transfer over insecure networks.
- Confidential data is stored in encrypted form so that there is a reduced risk of information being disclosed to administrators or data entry personnel.
- Regular back-ups are taken to avoid data loss in the event of a fire or natural calamity.

Safe as a Bank Vault
